

Backend developer test - demonstrate OOP and TDD skills

Summary

Create a simple report that shows transactions for a merchant id specified as command line argument.

The project should be done in Zend Framework 2.

Use Zend Framework 2 components as you see fit.

data.csv contains dummy data in different currencies, the report should be in GBP.

Assume that data changes and comes from a database, csv file is just for simplicity, feel free to replace with sqlite if that helps.

Please add missing code, unit test and documentation (docblocks, comments).

Provided code is just an indication, change if necessary. If something is not clear, improvise.

Don't spend more than 2h on this test

Good Luck!
